                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleotides'
```

The invention relates to an antisense compound acid molecule encoding phospholipid scramblase hybridises with and inhibits the expression of

t targetted to a nucleic I and which specifically phospholipid scramblase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an antisense compound targetted to a nucleic acid malecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I cells or tissues and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immume disorder and a hyperpositie grateries condition, e.g. cencer. The invention is useful for disgnostics, therapeutics and as research reagent. The present sequence is human phospholipid scramblase I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human phospholipid scramblase I antisense oligo, ISIS #120471
                                                                                                                                                                                                                                                                                                                                                                                                                            Human; antisense; phospholipid scramblase I; immune disorder; cancer; inflammation; hyperproliferative; antisense therapy; phosphorothioate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20 BP; 8 A; 3 C; 4 G; 5 T; 0 other;

The invention is useful for inhibiting the expression of human phospholipid scramblase I in cells or tissues and for treating an animal maxima a disease or condition associated with phospholipid scramblase I. The inflammation, an immune disorder and a hyperproliferative condition e.g. cancer. The invention is useful for dispossion, therapeuticus and accomplate I research resignent, the passent sequence is human phospholipid accamblase I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antisense compound targetred to a nuclical cacid molecule acciding phospholipid acramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an Funcleohase portion of an active after on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid carablase I in cells or itsues and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immune disorder and a hyperproliferative condition, e.g. cancer. The invention is useful for disgnostics, therapeutics and as research reagent. The present sequence is human phospholipid scramblase I
                                                                                                                                                                           Homo sapiens

                                                                                                                                                                                          The invention relates to an antisense compound targetted to a nuclic acid molecule enceding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an inunicables portion of an active site on a nucleic acid molecule encoding phospholipid scramblase. I The invention is useful for inhibiting the expression of human phospholipid excamblase I in cells or tissues and for treating an animal haring a disease or condition associated with phospholipid scramblase I such as inflammation, an immune disorder and a hyperproliferative condition of grant procedure of the phospholipid scramblase I much as inflammation, an immune disorder and a hyperproliferative condition of grant procedure in the specific said as the procedure of the procedure and a hyperproliferative condition of grant procedure and a hyperproliferative condition of grant procedure and a hyperproliferative conditions.

Novel entisense compounds targeted to nucleic acids encoding phospholipid exramblase I, for modulating gene expression and treating inflammation, immume disorders and hyperproliferative conditions e.g.

Claim 3; Page 76; 131pp; English

The invention relates to an antisense compound targetted to a nucleic acid molecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I in colls or tissues and for treating an animal having a disease or condition associated with phospholipid scramblase I, or which the expression of human phospholipid scramblase I, which is not a number of scramblase I are the proposition of the proposit research reagent. The present antisense oligonucleotide. sequence is human phospholipid scramblase I

The invention relates to an antisense compound targetred to a muchical cacid molecule encoding phospholipid extrablase I and which specifically hybridises with and imhibits the expression of phospholipid extrablase I or which hybridises with at least an a nucleokae active site on a mucheic acid molecule encoding phospholipid exambles active invention is useful for inhibiting the expression of human phospholipid scrambles of the compound of the composition of the co
                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antisense compounds targeted to mucleic acide encoding phospholipid examblase. For modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an antisense compound targetted to a nucleic acid molecule encoding phospholipid scramblase I and which specifically pyridises with and inhibits the expression of phospholipid scramblase I, or which physiciase with at least an a-nucleobase prition of a street in the street of a nucleic acid molecule encoding phospholipid cramblase. The invention is useful for inhibiting the expression of human phospholipid accamblase in real accamblase or condition associated with phospholipid cramblase. Buying a disease or condition, an immune disorder and a hyperproliferative condition, e.g. cancer. The invention is useful for disapposition, therapeutics and a camb accamb accamb accamb accamb teacher. The present sequence is human phospholipid scramblase II are research resigns.
                                         17-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                              modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      02-APR-2002; 2002WO-US10529
                                                                                                                                                                                                                                                                                                                                                                                    ISIS PHARM INC
```

The invention relates to an antisense compound targetted to a mulgic acid molecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I calls or itssues and for treating an animal having a disease or condition associated with phospholipid scramblase I, necessary the expression of human condition. The invention is useful for disposetics, therapeutics and as inflammation, an immume discorder and a hyperproliferative condition, e.g. cancer. The invention is useful for disposition, because of the condition of the Sequence 20 BP; 5 A; 4 C; 7 G; 4 T; 0 other; research reagent. The present sequence is human phospholipid scramblase I antisense oligonucleotide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an antisense compound targetted to a nucleic acid molecule according phospholipid scramblase; and which specifically phyridises with and linkhoppholipid scramblase; and which specifically or which hybridises with at least an sendeabasespoolipid scramblase crive site on a nucleic acid molecule encoding phospholipid scramblase. In the invention is useful for inhibiting the expression of human phospholipid scramblase I in cells or tissues and for treation of human phospholipid and annual harded disease or condition associated with phospholipid an annual harded disease or condition associated with phospholipid and annual cancer. The invention is useful for dispospholipid phospholipid scramblase I research reagent. The present sequence is human phospholipid scramblase I

                                                                                                                                                                                                      The invention relates to an antisense compound targetred to a nuclically positival, and inhibits the expression of phospholipid corabbles? I which deserve with and inhibits the expression of phospholipid corabbles? I or which hybridises with at least an annucleobase portion of an active site on a nuclease and note other annucleobase portion of an active site on a nuclease and for the nucleobase portion of an active scramblase I in cells or tissues and for treating an animal hundred scramblase I in cells or tissues and for treating an animal hundred disease or condition associated with phospholipid acramblase I such as inflammation, an immune disorder and a hyperpoliferative condition. e.g. cancer. The invention is useful for disgnostice, thereposition and as research reagont. The present sequence is human phospholipid scramblase I
                                                                                                                                                                       Seguence 20
                                                                                                                                                                                                                                                                                                                                                                                                           Novel antisense compounds targeted to nucleic acide encoding phospholipid scramblase; for modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g.

                                                                                                                                                           The invention relates to an antisense compound targetred to a nucleic acid molecule encoding phospholipid extrabilate I and which specifically hybridises with and inhibits the expression of phospholipid extrabilate I or which hybridises with a least an encoding phospholipid extrabilate I are invention as uncleic acid molecule encoding phospholipid phospholipid extrabilates I in cells or tissues and for treating a name having a crambiase I in cells or tissues and for treating a name having a disease or condition associated with phospholipid extrabilate and have a cancer. The invention is useful for disaproctics throughout condition, e.g. cancer. The invention is useful for disaproctics throughout standard concer. The present sequence is human phospholipid scramblase I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Movel antisense compounds targeted to nucleic acide encoding phospholipid scramblase I, for modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g.
                                                                                                  Sequence 20 BP; 3 A; 4 C; 7 G; 6 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 3; Page
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-APR-2001; 2001US-0828344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          02-APR-2002; 2002WO-US10529
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modified_base
                                                                                                                                                    antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2003-058495/05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bennett CF

The invention relates to an antisense compound targetred to a multically hybridises with and inhibits the expression of phospholipid scramblase; I, or which hybridises with at least as an encleobase parties of an active site on a nucleise with at least as nucleobase parties of an active site on a nucleise acid molecule encoding phospholipid acramblase. I. The invention is useful for inhibiting the expression of human phospholipid acramblase I in cells or tissues and for treation or human phospholipid diseases or condition associated with phospholipid acramblas. If his manufaction, an immune disorder and a hyperproliferative condition of concern the invention is useful for disgnostics, therepeutics and acramblase I research research respect to the present sequence is human phospholipid acramblase.

The invention is useful for inhibiting the expression of human phospholipid scramblase I in cells or tissues and for treating an animal having a disease or condition associated with phospholipid ecramblase I, and in manued disorder and a hyperprolicerative condition, estimates in the expression of human phospholipid scramblase I, and the second of the expression of human phospholipid scramblase I, and the second of the expression of human phospholipid scramblase I, such as inflammation, an immune disorder and a hyperprolicerative condition, estimate in the properties of the expression o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an antisense compound eargetred to a muclically puridises with and inhibits the expression of phospholipid exambles; it with hybridises with at least an in-nucleokase portions are the intending section and extending and the expression of phospholipid exambles; it with hybridises with at least an in-nucleokase portions are the intending section of a mucleic acid molecule encoding phospholipid canable are the invention is useful for inhibiting the expression of human phospholipid enrablase. It means to the expression of the area of the condition associated with phospholipid scramblase. With a disease or condition associated with phospholipid scramblase. With a cancer. The immune disorder and a hyperproliferative conditions of the present sequence is human phospholipid scramblase I

The invention relates to an antisense compound targetred to a mucliar acid molecule amoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-mucleobase portion of an active site on a mucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I restricted by the stream of the str

The invention relates to an antisense compound targetred to a muclically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an se-mulcobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid deramblase I in cells or itseuse and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immune disorder and a hyperproliferative condition. Second of the capacities and a present respect respective production is sequenced in human phospholipid scramblase I.
                                                                                                                                                                             Claim
                                                                                                                                                                                                     cancer
                                                                                                                                                                                                          Novel antisense compounds targeted to nucleic acide encoding phospholipid scramblase I, for modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g.

                                                                                                                                                                                                                             Co. This sequence is a probe for the mouse ide-1 gene, The probe it used in cot the method of the invention which relates to a novel quantitative reverse transcriptease polymerase chain reaction (RT-PCR) assay for quantitative comessaure of the expression of a gene of interest in a biological sample by contention also relates to a method for determining a quantitative contention also relates to a method for determining the effect of a contention of a quantitative measure of the expression of a gene of the superior of a gene of the superior of a gene of the superior of the superior of the gene of interest, in a sample by determining or a normalised RNA equivalent for the gene of interest a first untreated sample and a second treated sample. The methods are used for quantitative gene expression, where determination of changes in gene expression of the biological response to a treatment or drug. The method have uses in prognostic and diagnostic applications.

The compounds are useful for diagnostics. Therapputics and as research reagent, o, g, prophylactically to prevent compounds are eachly and effectively administered to humans. BARJOSSS-BARJOSSS represent the entirense oligonuclocides of the

                                                                                            The invention relates to an antisense compound targetted to a muclic acid molecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-mucleobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I in cells or tissues and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immune disorder and a hyperprotificrative condition, e.g. cancer. The invention is useful for disgnostics, therapsutics and as research reagent. The present sequence is mouse phospholipid scramblase I.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antisense compound targetted to a nucleal cacid molecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid caramblase I, or which hybridises with at least an 8-nucleohase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I or calls or itsense and for treating an animal having a disease or condition associated with phospholipid scramblase I, and the expression of human phospholipid scramblase I, or calls or itsense and for treating an animal having a disease or condition associated with phospholipid scramblase I, such as inflammation, an immune discorder and a hyperpolitierative condition, e.g. cancer. The invention is useful for dismostics, therapsutics and as research reagent. The present sequence is mouse phospholipid scramblase I antisense oligonucleotide.

The invention relates to an antisense compound argetted to a multically careful molecule encoding phospholipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase I, or which hybridises with at least an 8-nucleohase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I or cells or tissues and for treating an animal laving a disease or condition associated with phospholipid scramblase I an immune disorder and a hyperproliferative condition, estimated the scramblase I are minimum disorder in the scramblase I are monthly the scramblase I are more condition.
                     antisense oligonucleotide
                                                                                                                                                                                   Claim 3; Page 79; 131pp; English
                                                                                                                                                                                                                  Novel antisense compounds rargered to nucleic acids encoding phospholipid excramblase; for modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g.
                                                                                                                                                                                                                                                                                                                                                05-APR-2001; 2001US-0828344

                                                                                                                                                                                                                                                          The present invention describes a purified polymodectide (T) corresponding to a mutant form of a connextu 36 polymptics implicated in a hereditary sensory defect, where the mutant preponsible for prelingual non-syndromic desfines. The present sensors represents a PCR primer for use in methods for the decision of a hereditary sensory defect, from the present invention. The methods from the present invention that methods from the present invention can be used to detect a hereditary ensory defect,

The invention relates to an antisense compound targetted to a nucleic acid molecule encoding phospholipid acramblase I and which specifically hybridises with and inhibits the expression of phospholipid foramblase I, or which hybridises with at lesst an 8-nucleobase portion of an active site on a nucleic acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase I no cells or tissues and for treating an animal having a disease or condition associated with phospholipid scramblase I, which as inflammation, an immune disorder and a hyperpositic patient condition, e.g. cancer. The invention is useful for disgnostics, therapsutics and as research reagent. The present sequence is mouse phospholipid scramblase I antisense oligonucleotide.
AAT29770 standard; cDNA; 20 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antisense compounds targeted to nucleic acide encoding phospholipid scramblase; for modulating gene expression and treating inflammation, immune disorders and hyperproliferative conditions e.g.

ANA91991.7 prepresent PCR primers used to amplify open reading frames and other mucleic acid sequences from the genome of chamydia pneumoniae (see ANX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent office media, erythema nodosum or pharyngitis. The polypoptice scooded by the open reading frames of the C. pneumoniae genome (see ANY31990) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences oan also be used as immunogenic compositions, especially where the vector directs the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis;
sinustius; purulent chtis media; exytheme nodosum; pharyngitis;
vaccine; neutralising epitope; PCR primer; ss.

controlleds this for determining the presence or absence of a SNP, using the collapse of the invention. The PCR primers are used to amplify a collapse of the invention. The PCR primers are used to amplify a collapse of the invention. The PCR primers are used to amplify a collapse of the oligonucleocides are useful for genotyping a nuclear acid sample by performing a single-mucleotide primer extension reaction. The collapse of the primer action of the presence, absence or cleantity of a SNP and for genotyping muclear acid samples, for e.g. to casses by association analysis the genotype of an individual or group of multivaluals, having a pathological phenotypic trait suspected of being caused by one or more SNPs. Phenotypic traits include disease e.g. agammaglobulinaemia, diabetes inspirades, secch-myhan syndrome, muscular dystrophy, familial hypercholesterolaemia, polycystic viduals according to the steogenesis imperfecte and acute intermittent porphyria. Phenotypic traits also include symptoms of or susceptibility to multifactorial diseases of which a component is or may be genetic such as autoimmure diseases, including, rhomatoid arthritis, multiple soleronia controlled in the collapse of the c

The oligomolectides can be willized for diagnostics in vitro. The oligomolectides can be willized for diagnostics, the treatment of diseases associated with the contract of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel antisense compounds capable of modilating expression of human Integrin-linked kinase, useful for diagnosis, prophylaxis and treatment of diseases, e.g. tumors, associated with expression of the kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       the expression of hIK, prophylaxis e.g. to prevent or delay infection inflammation or tumor formation and as research reagent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  paternity analysis. The present sequence represents a PCR primer specific for a human SNP containing DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; integrin-linked kinase; hIK; infection; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Integrin-linked kinase coding region targeted oligonucleotide #7.

The invention relates to an antisense compound targetred to a nuclically card molecule encoding phosphoisipid scramblase I and which specifically hybridises with and inhibits the expression of phospholipid scramblase; or which hybridises with all least as a nucleokae portion of an active site on a nucleice acid molecule encoding phospholipid scramblase I. The invention is useful for inhibiting the expression of human phospholipid scramblase are in cells or tissues and for treating are named as scramblase. In cells or tissues and for treating are named as the disease or condition associated with phospholipid scramblase. But in the second of the second o

                The invention relates to a transformed silworm that has a polymucleotide encoding human collagen in its genomic DNA and produces recombinant human collagen as a part of protesins in its occoord oral silk gland. The transformant is for producing recombinant human collagen which can then be used for application in medicine, foods and commetics. The recombinant human collagen thus produced is highly pure and available easily in large quantities, which is highly safe, free from contenniants like pathogens including viruses and prions and does not show antigenicity in humans. The present sequence is that of a human collagen related silk worm polymucleotide PCR primer used in examples of the invention.
                                                                                                                                                                                                                                                                                                                                                              (NISC-)
                                                                                                                                                                                                   Transformed silkworm producing recombinant human collagen in silk gland, for application in medicine, foods and cosmetics

                                                                                                                                                                      Matches
                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                        This invention describes the isolation of novel human polymucleotides encoding glypican-ralized proteins e.g.ypican-6 (GPC4). The invention also describes the polymucleotide and encoded protein sequences of glypican-1 (GPC1), glypican-2 (GPC3) and glypican-6 (GPC5). The products of the invention can be used to diagones and treat disorders and diseases, particularly those involving abnormal call growth and behaviour, such as scentic overgrowth and them formation. ARZ00560-Z00580 represent primars used in the amplification of GPC4.
  Human genome; biallelic marker; high density disequilibrium map
                      Human biallelic marker upstream amplification primer SEQ ID NO:4441
